EXPERIENCES

Senior Engineer, Rime, Voice AI

2025 — Present

- Engineering low-latency Voice AI systems (agent orchestration, multi-model pricing/usage tracking, OOV pipelines, WebSocket streaming), resulting in 10× revenue growth.
- Developed AI agent playbooks that decompose open-ended tasks into deterministic workflows with validation and human-review steps, improving first-pass code quality by 80%.
- Took the team to 99.9% uptime and 95% test coverage by making reliability everyone's job: small PRs, owned end to end, reviewed commit by commit. In realtime voice AI, uptime and latency are everything.
- Delivered a sub-200ms SLA across all non-TTS APIs and sub-100ms P99 latency on multiple high-traffic endpoints.
- Worked with enterprise clients from technical scoping through production deployment, consistently winning executive buy-in and the revenue behind a **\$24M Series A**.

Engineering Lead, Rtzen, Financial OS for businesses

2023 — 2025

- Drove a 0 → 1 transformation (also as fractional PM) from AI suggestions to fully autonomous AI actions, delivering ~70% efficiency gains at scale across most clients.
- Built generative-UI capabilities; in the early phase they saw 2–3× more usage than standard chat-based agents.
- Built a tiered extraction pipeline for AP invoices: native PDF parsing first, Azure and AWS document extraction when that falls short, Claude and OpenAI via OpenRouter last. Doubled accuracy on the hardest documents.

Engineer (P/T), Meter (**unicorn**), Internet as infrastructure

2023 — 2024

- Led a new product offering from a single-page doc and worked as fractional PM (with the founder) building POCs for future expansion.
- Built an internal design system and micro-frontend architecture (alongside a designer who was founding + lead designer at Stripe for 8 years).
- **Backed by founders of OpenAI, Stripe & VMware** and execs from Goldman Sachs, Shopify, Adobe, Qualcomm. Used by Perplexity, OpenAI, Cursor and other leading startups.

Founding Engineer, Dyte (**acq. Cloudflare**), SDKs for live experiences

2021 — 2023

- Built a multi-platform WebRTC SDK with React Native (showcased at React Conf — running React Native inside Flutter), reaching parity with Twilio & Zoom in ~a month, **as the sole mobile-engineering hire**.
- Built a library to facilitate multi-threading / pre-loading the JS thread.
- Implemented webinar, group calls, screen sharing, and plugin features across the SDKs.

VP of Product, Zepto (**unicorn**), Quick commerce

2021

- Cut load time from >5s to <2s by trimming API payloads and moving non-essential calls/tasks to the background.
- Fixed most of the state-management code in the React app, resulting in no visible re-renders.

Frontend Lead, Supertokens, Open source auth

2020

- Owned the entire front-end side of the business.
- Revamped frontend pages, **reducing bundle size by ~50%**.
- Contributed to the platform's open-source frontend SDKs.

Software Engineer, Liquiron, Marketing SaaS

2018 — 2020

- Integrated Facebook, Twitter, Google & LinkedIn Marketing APIs into a unified dashboard to publish campaigns across channels.
- Built product SDKs for other frameworks and a **multi-tenant payment flow**.
- Built plugins/SDKs to embed the product into other platforms.

HIGHLIGHTS

- Last 5 startups I have worked at: **2 unicorns** and **1 acquired by Cloudflare** (early engineer).
- Previously a startup founder — scaled to **50+ locations**.
- **Google Code** Finalist.

RECOMMENDATIONS

“Rohit came in at a crucial moment when Rime needed reliability, and he executed and helped us up our game.”

Ares

Founder & COO, Rime (\$24M Series A)

“If you're on the lookout for a sound engineer who embodies the true startup spirit, Rohit is your go-to person!”

Anand Chowdhary

Head of Product & Founding Team @ Sycamore (\$65M seed)

“Rohit was the first mobile engineer we hired to build our mobile SDKs. If you have a complex technical project and want some magic, hire Rohit.”

Palash Golecha

Director Engineering @ Cloudflare, prev co-founder Dyte

SKILLS

React, Next.js, React Native, TypeScript, Node.js, GraphQL, tRPC, Redux, Zustand, Postgres, Hasura, Supabase, Firebase, GoLang, Gin, WebRTC, WebSockets, Micro-frontend architecture, Tailwind, RAG / AI agents, MCP servers & clients, Anthropic, OpenAI, OpenRouter, Vercel AI Gateway, CI/CD, Vercel.

EDUCATION

Bachelor's in Computer Science

SRM University · 2014 — 2018
