EXPERIENCES

Senior Engineer, Rime, Voice AI

June 2025 - Currently

- Engineering low-latency Voice AI systems (agent orchestration, multi-model pricing/usage tracking, OOV pipelines, WebSocket streaming), resulting in 10× revenue growth.
- Developed AI agent playbooks that decomposed open-ended tasks into deterministic workflows with validation and human review steps, reducing ACU usage by 50% while improving first-pass code quality by 80%.
- Delivered sub-200ms SLA across all non-TTS APIs and achieved sub-100ms P99 latency on multiple high-traffic endpoints

Engineering Lead, Rtzen, Financial OS for businesses

April 2023 - June 2025

- Drove a 0→1 transformation (also worked as fractional PM) from AI suggestions to fully autonomous AI actions, delivering ~70% efficiency gains at scale across the majority of clients.
- Worked on generative UI based capabilities in the platform, in the early phase, witnessed 2-3x more usage compared to standard chat-based agents.
- Rewrote the data extraction module to use multiple models to extract data from unstructured sources (primarily PDF's), doubling the accuracy on hard-to-understand documents

Engineer (P/T), Meter (joined Series A, Unicron), Internet as Infra

March 2023 - Oct 2024

- Led the development of a new product offering from a single-page doc and worked as a fractional PM (along with the founder) in building POCs for future product expansion.
- Worked on an internal design system and micro-frontend architecture (worked with a designer who was founding at Stripe, and lead designer at Stripe for 8 years)
- Backed by Founder(s) of OpenAI, Stripe, VMware, C(s) of Goldman Sachs, Shopify, Adobe, and Qualcomm. Also, used by most of the hottest tech startups like Perplexity, OpenAI, Cursor, etc

Founding Engineer, Dyte (Acq by Cloudflare), SDKs for live experiences

April 2021 - Mar 2023

- Developed multi-platform WebRTC SDK using React-Native (showcased at React conf, running react-native inside Flutter), giving us platform parity with competitors (Twilio, Zoom) in about a month (**was the sole hire for mobile engineering**).
- Built a library to facilitate multi-threading/Pre-loading JS thread (more here).
- Implemented webinar, group calls, screen sharing, and plugin features in our SDKs

VP of Product, Kiranakart, Quick Commerce (Unicorn)

Feb 2021 - Mar 2021

- Optimized load time from > 5 seconds to less than 2 seconds by reducing the payload of APIs and shifting non-essential API calls and tasks to the background.
- Fixed most of the state management code in the React app, resulting in no visible re-renders.

HIGHLIGHTS

- Last 5 startups I have worked at, 2 unicorns, 1 acquired by Cloudflare (early engineer)
- Previously, a startup founder scaled to 50+ locations

SKILLS

React, NodeJs, GraphQL, Typescript, Postgres, React-Native, NextJs, Redux, CSS, SCSS, Mocha, Chai, Jest, Objective-C, Java, Material UI, webRTC, Firebase and CI/CD, WebSockets, Tailwind, GoLang, Gin, Vercel, Micro-frontend architecture, Prime-react, Hasura, Chakra Ui, Supabase, savelet, CSS3, Cross Browser Compatibility, Trpc, Cursor, ChatGpt, Claude, ChatGpt, deepseek, AI, Remix, MCP Servers and Client, IndexdDb, Zustand, RAG based AI agent, cursor, Anthropic, OpenAI

Social Link

- [npm](#),
- [Linkedin](#)

Frontend Lead, Supertokens, Open source auth

Jan 2020 - May 2020

- Responsible for managing the entire front-end side of the business
- Revamped frontend pages, resulting in the **reduction of bundle size by almost 50%**
- Worked on open-source frontend SDKs of the platform ([contributors](#))

Software Engineer, Liquiron

Sept 2018 - Jan 2020

- Worked on integration of Facebook, Twitter, Google and LinkedIn (Marketing api) providing a unified user dashboard to publish campaigns across various channels
- Built SDKs of our product on other **frameworks and wrote a multi-tenant payment flow**.
- Built plugins/SDK to integrate our product into other platforms.
